  general theory of crime 18–20
  high-, low- and medium-rate offenders 49–50
  levels of 20–2
  past and subsequent criminal activity, relationship between 25, 93
  propensity 18–19, 48
self-selection 21–2
  social control 18–22, 25
self-selection 21–2, 31, 39
semiparametric mixture models see also semiparametric mixture Poisson model
  age–crime curve, studies on 54–6
  latent classes 54, 215, 230
  unobserved heterogeneity 72–3, 222
semiparametric mixture Poisson model 176 n11
arrest 252
  latent classes 215, 230
  local solutions 230
  past and subsequent criminal activity, relationship between 94,
  214–21, 224, 226, 230–4, 239–42
propensity 248
state dependence 214–18
support, points of 239
unobserved heterogeneity 214
semiparametric probit models 86
semiparametric random effects model 10, 72–3, 75, 91, 133, 216
Sen, P. K. 284
serial dependence, accounting for 278–80
serious offenders
adolescent-limited arrest
trajectory 206
age-crime curve 4
arrest 190–1, 199–201, 220
behavioral change 259
California Youth Authority 96–7, 129 n11, 143–7, 160–1
high-rate offenders 262–3, 267
index crimes 268
latent classes 181, 190–1, 199–201, 206, 209
past and subsequent criminal activity, relationship between 220, 247–8
population homogeneity and 9 n5
sexual abuse 116, 153–4
