PERFACE

Our country is a country located in the tropical climate. Therefore air conditioners occupy a significant position in the life and activities of the industry. When that economic life improve, the demand for air conditioning as high, can say almost in all the buildings, offices, hotels, hospitals, restaurants, some factory, ... were and are building are equipped with air-conditioning system. The purpose of the air conditioner is created microclimate environment suitable for human physiological condition and enhance operational reliability of technological equipment.

So the air conditioner facilities of buildings, offices, hotels, restaurants ...

With the subject "ELECTRIC SYSTEM DESIGN FOR BUILDING THE FRIENDSHIP TOWER. Proposing to the subject, we have to apply the knowledge, work experience and other relevant documents to calculate, designed under the guidance of master Vo Thien My.

Because this is the first implementation of the calculation, design for a large, more limited expertise and practical experience yet so there will be many shortcomings. The glass look forward to your comments as well as telling you your message to teachers we gain experience and progress later. We sincerely thank!

THANKS

Throughout more than four years of study and work out under Van Lang University Lecture with love and devotion, wholeheartedly because students of the teachers in the Faculty of Engineering of Heat has helped students to accumulate a lot of specialized knowledge and technical skills necessary in life.

Firstly we would like to send to my parents, my family thanks and deep gratitude for the words of encouragement, support and inspiration throughout the implementation process and complete the dissertation.

Group I please be sincere thanks to Van Lang University, training rooms, faculty offices, and especially the M.sc Vo Thien My have direct instructions, help the team throughout the process of completing the thesis with the topic "DESIGN MECHANICAL ELECTRICAL FOR THE FRIENDSHIP TOWER BUILDING".

Sincere thanks to Dr. Le Tien hung, head of the Faculty of engineering of heat was dedicated to helping students throughout the learning process and accumulated a lot of knowledge in schools, the school of life.

Group I would like to thank!
