CHAPTER 7

CONCLUSION AND RECOMMENDATIONS

7.1 THE CONCLUSION:

After a process that made thesis we tried maximum to complete his thesis. Within the thesis I have made are the following job:

- Overview of air conditioner.
- Reading principle and drawing.
- The calculation and select the device for project.
- Use of the software and understand the status of Use of the software and understand the status of

This calculation process we noticed that she was done properly according to the references. However, in the process of implementing projects of thesis is still limited in experience and knowledge should not be avoided the shortcomings in the process of calculation.

7.2 RECOMMENDATIONS:

In the process of implementing and deploying map a graduation occurred about the time and scope of reference material, including in the calculation process to avoid wasting time doing projects, we have a number of proposals and some the method to solve the following

- Identify early implementation, and learn projects, reading relevant documents before starting to implement the plan.
- Identify the main document to implement the projects.
- Looking for a replacement for the type of gas gas conditioning is currently still more limited capacity, causing fire and explosion and impact to the environment
